

IN THE ABSTRACT

Please amend the abstract paragraph as follows:

--A method of producing a pattern on a surface of a substrate is presented. First, a patterned coat of a binder material is applied to the surface of a substrate; and then a dry pigment material is applied to the surface of the binder material. The pigment material includes flakes of a cholesteric liquid crystal material. The pigment material adheres to the binder material. ~~The application steps may be performed using a printer such as a xerographic or laser printers.~~
